TK'Blue joins APCC as transport and supply-chain specialist

(Association of Professionals in Climate, Energy and Environment Consulting)

The APCC (<http://apc-climat.fr/>) is a leading player in the field of climate, energy and environmental economics. It actively participates in national policies in order to act for the transition towards a decarbonated economy and the preservation of natural resources.

The CPA Board of Directors has just approved the membership of TK'Blue in order to benefit from its expertise in logistics. It reinforces its response to increasingly frequent requests, notably from Ademe, for "transport" sector expertise in the fields of Climate, Energy and Environment.

TK'Blue's APCC's membership enables the Agency to enrich its scientific and methodological exchanges and enlarge its presence on these increasingly important issues of decarbonation and responsibility of transport stakeholders.

The 3 subjects currently dealt with by TK'Blue within the CPA:

- Drafting of a PCAET/Mobility Note: "How to take a position on the transfer of the mobility competence following the LOM".
- Drafting of a Note concerning the opinions of the profession on ADEME's Mobility Strategy
- Drafting of a Note relating to LOM (Laws on Mobility): Positioning of the CPA

TK'Blue is committed to being a very active member of this association, which gave birth to the Bilan Carbone Association a few years ago, with a leadership recognized by all.

About TK'Blue - www.tkblueagency.com

TK'Blue is a non-financial rating and labelling agency of transport that measures, rates and promotes the eco-responsible performance of each of the stakeholders, in compliance with the legislative and regulatory requirements relating to CO2 emissions and CSR.

TK'Blue provides them with a global and recognized platform of services to select, enhance and measure the precise societal impact of their eco-responsible choices and collectively share their benefits in a dynamic and sustainable way.
